Location: Bangalore, India

Email: kanhaiya.kk20598@gmail.com

Mobile: 8804936144

PROFESSIONAL SUMMARY

Java Backend Developer specializing in **Java 21, Spring Boot, REST APIs, and Microservices**, with experience designing scalable backend systems using **Hexagonal Architecture**. Built **AI-powered backend solutions including CV parsing, candidate fitness scoring, and semantic job classification** using **Google Gemini LLM, embeddings, and PostgreSQL pgvector**. Strong expertise in **API development, database optimization, and clean architecture**, with a solid foundation in **Data Structures & Algorithms (500+ problems solved)** and delivering high-performance solutions in Agile environments.

TECHNICAL SKILLS

Languages: Java 21

Frameworks & Libraries: Spring Boot, Spring MVC, Spring Data JPA, Spring Security, Hibernate

Databases: MySQL, PostgreSQL

Backend Technologies: RESTful APIs, Microservices, API Design, AWS, Swagger

Architecture & AI: Hexagonal Architecture, LLM Integration, Embeddings, Vector Search, System Design

Build, DevOps & Tools: Gradle, Git, GitHub, Docker, CI/CD, Sentry, Jira

Testing: JUnit, Mockito, Postman

Core Computer Science: OOPs, Collections, Data Structures & Algorithms

EXPERIENCE

Backend Developer – Product Development

July 2025 - Present

Duru Cooperation

Bengaluru, India

Tech Stack: Java 21 | Spring Boot | RESTful APIs | LLM Integration | AI | pgvector | Embeddings

- Developing and enhancing backend functionalities using **Java 21 and Spring Boot**, following **Hexagonal Architecture (Ports & Adapters)** principles.
- Architected and delivered an **AI-powered CV Parsing system**, integrating **Apache Tika and Google Gemini 2.5 Flash LLM** for intelligent structured resume data extraction, **reducing manual resume processing time by 80%**.
- Developed an **AI-driven candidate fitness scoring system** that generates **0–100 job-fit scores** using **Gemini LLM**, enabling recruiters to quickly rank and filter applicants.
- Built an **AI-powered job classification suggestion engine** using Java, Spring Boot, **Gemini embeddings**, and PostgreSQL pgvector that **analyzes job title, description, and skills** during job posting to automatically suggest relevant Job Function and Industry via **semantic vector search**.
- Improved **CI/CD pipeline** performance by removing redundant **Gradle builds** from the **Docker image** and implementing **Gradle dependency caching in GitHub Actions**, reducing deployment time by **~40% (18 → 11 minutes)** and lowering CI infrastructure costs.
- Designing and maintaining **RESTful APIs** to enable seamless integration with frontend applications and external systems.
- Optimizing existing modules and resolving critical bugs**, improving system performance, stability, and reliability.
- Leveraging **Gradle for build automation**, **Swagger for API documentation**, and **Sentry for monitoring and error tracking**.
- Collaborating with **product managers, UI/UX designers, frontend developers, and QA teams** in an **Agile (Jira) environment** to deliver end-to-end product features.
- Conducting **technical interviews** and **candidate evaluations** for backend roles, assessing skills in Java, Spring Boot, and problem-solving.

Software Engineer

May 2022 – Nov 2024

Cognizant Technology Solutions

Bengaluru, India

Tech Stack: Java | Spring Boot | Microservices | RESTful APIs | JUnit | Hibernate | MySQL

- Designed and deployed high-performance, scalable **RESTful APIs** utilizing **Spring Boot**, leading to a 10% enhancement in application response times.
- Optimized data management by utilizing **JPA and MySQL**, reducing database query retrieval times by 15%.
- Contributed to the design, development, and deployment of new application features while efficiently identifying and resolving high-priority production issues.
- Ensured software reliability by implementing comprehensive unit and integration tests with **JUnit** and

Mockito, achieving over 90% test coverage and minimizing defect risks.

- Conducted thorough validation of **REST endpoints** via **Postman**, ensuring 100% API uptime during testing and proactively identifying and resolving performance bottlenecks.
- Collaborated with **cross-functional** teams across the **SDLC**, from requirement gathering to development, testing, and deployment.

EDUCATION

Visvesvaraya Technological University

Bachelor of Engineering in Electronics and Communication Engineering

Bengaluru, Karnataka, India

Aug 2017 – Aug 2021

PROJECTS

Movie Ticket Booking System [[Link](#)]

Tech Stack: Java | Spring Boot | Spring Data JPA | Hibernate | REST APIs | MySQL

- Developed **RESTful APIs** for movie ticket booking and cancellation, handling seat allocation, pricing, and user requests.
- Utilized **Spring Data JPA** for efficient database management, implementing validation, **exception handling**, and optimizing queries.
- Designed secure **cancellation logic** and **custom responses** to improve user experience and system reliability.

AI-Powered CV Parsing System

Tech Stack: Java 21 | Spring Boot | REST APIs | PostgreSQL | Apache Tika | Gemini LLM

- Built an **enterprise-grade resume parsing engine** using Java 21, Spring Boot, Hexagonal Architecture, Apache Tika, and Google Gemini 2.5 Flash LLM.
- Automated extraction of structured resume data from **multiple document formats**, enabling **one-click candidate profile creation**.
- Implemented **schema-driven prompt engineering**, achieving **~90% parsing accuracy improvement**.
- Reduced **manual resume processing time by 80%** through automated resume parsing and profile generation.

CERTIFICATIONS & ACHIEVEMENTS

- [Microsoft Certified: Azure Fundamentals](#)
- [Generative AI Fundamentals](#)
- [Certificate of completion: Claude 101](#)
- Solved **300+** problems on [LeetCode](#) and **200+** on [GeeksForGeeks](#), building strong analytical and **problem-solving skills** in Data Structures and Algorithms.
